

ESP specialises in analysing the accuracy of your electricity accounts and ensuring you have the best electricity solution for your business.

We are a team of experienced professionals with a wide range of experience in the electricity industry.

We understand the complexity of the electricity marketplace, how it is metered and billed and want to help you get the most cost effective connection for your business.

Typically, savings can be in excess of 10% and often much more. In some cases the savings have been in the thousands of dollars.

Three main areas require specific attention:

- Billing
- Metering
- Network Connection

ESP will investigate each of these, providing a comprehensive report outlining potential savings and the solutions for achieving them.

Energy Solution Providers is a member of the Energy Management Association, a technical group of the Institute of Professional Engineers New Zealand (IPENZ) recognised by the Energy Efficiency and Conservation Authority (EECA).

As a member of the Auckland Chamber of Commerce we are proud to offer our services to fellow members.

We work in partnership with Energy Management Services (EMS), the major meter installer for the electricity industry.

If you are being penalised, every day you wait is costing you money. Phone our Help Desk on

0800 ESP LTD
(0800 377 583)

for more information or fax us your power bill on

0800 ESP FAX
(0800 377 329)

and we'll let you know how much you can save.

If you haven't investigated your electricity accounts lately, you need to read this

Dear Customer,

If you haven't investigated your electricity billing, metering and network connection you could be paying thousands of dollars a year more than you need to. Energy Solution Providers (ESP) specialises in unraveling the complex electricity industry, providing unbiased advice on how to save money by ensuring the accuracy of your metering, power account billing and network connection.

Our specialised investigation service has saved our clients hundreds and thousands of dollars per annum. Companies such as AMP, Bayleys Property Management, Jones Lang LaSalle and Tegel Foods Ltd have benefited from our comprehensive analysis of their energy needs. Each client is presented with an easy to understand report highlighting the savings and what steps need to be taken to rectify any problems that may exist.

This brochure outlines our key services which, I personally believe, will assist you in achieving the electricity savings you are entitled to.

Contact us today for your personalised energy solution. We look forward to speaking with you very soon.

Yours sincerely

Jeremy Allen
Managing Director

ESP regularly works with network and retail companies including: Contact Energy, Empower, Genesis, Mercury Energy, Trustpower, United Networks, Vector.

Step 1 Investigate the Metering

It is very important to ensure that the power you pay for is actually the power you are using. ESP will complete a full review of switchboards and sub-boards verifying that the metering is accurate and correctly set up for your application.

Step 2 Investigate Billing and Network Connection

A close examination of electricity accounts and network connection will identify any errors and potential areas for electricity savings. ESP will provide a detailed profile of power consumption for future tariff negotiation.

Step 3 Establish a Power Usage Footprint

This step provides a benchmark to measure energy efficiency incentives. These profiles indicate where and how your power is consumed, providing strategies for reducing your overall energy costs.

SIX STEPS TO ACCURATE POWER ACCOUNT BILLING

Step 4 Power Factor Analysis

Many companies are not aware that poor power factor can result in thousands of dollars per year in additional network charges and/or penalty charges. Our report will indicate what equipment is required to correct your power factor to .95 or better and also the cost and the savings to be expected.

Step 5 Tariff Negotiation

If you are currently in the process of negotiating rates, you will probably have found accurately comparing prices and contracts can be extremely difficult. ESP simplifies this process by using our expertise to cut through the confusion. We compare the rates and contracts of each retailer and present our recommendations in a easy to understand graph.

Step 6 Recommendations

While assessing your electricity usage, we may recommend a further energy management investigation be completed by one of our auditors in accordance with the standards promoted by the Energy Efficiency and Conservation Authority (EECA) and the Energy Management Association (EMA). If any electrical safety concerns are identified we will also recommend that an electrical safety inspection is completed by one of our electrical inspectors.
